

FORTH Exploitation Plans

- FORTH has started to discuss possible exploitation of two technologies developed within CumuloNimbo with industry
 - The use of MultiEdge to build storage area networks over commodity Ethernet switches, especially with the increasing deployment of 10GigE infrastructure.
 - The use of the data indexing approach developed in CumuloNimbo to improve the efficiency of HBASE servers to provide a novel API over emerging non-volatile memories (NVM).
- FORTH has discussed with UPM the possibility of participating in the spin-off being created by UPM to exploit CumuloNimbo technology and is currently examining the legal framework of such an engagement
