

CumuloNimbo
Final Review Meeting
Brussels, Belgium
²⁷November 2013

Exploitation Plan
McGill University

Exploitation

- SHBase client transactional support will become part of the startup exploitation
 - To facilitate this in the easiest way, it is likely that we make it open-source
- Recovery management has been published
 - ACM/USENIX/IFIP Int. Conference on Middleware, December 2013
 - Will be made open-source
- Indexing
 - If interest from HBase, we will provide it as a patch. It's is not tightly coupled with the HBase server code, so that should be easily possible
- Further Technology Transfer
 - Sabbatical of Prof. Kemme in Year 2014/2015 will be partially spent at SAP Montreal and possibly also Palo Alto and Belfast.
 - Focus will be on the HANA Enterprise Cloud
